Privacy as a proposed PMBOK 8 performance domain

SIPA Privacy 2 group · Who (WH) concentration

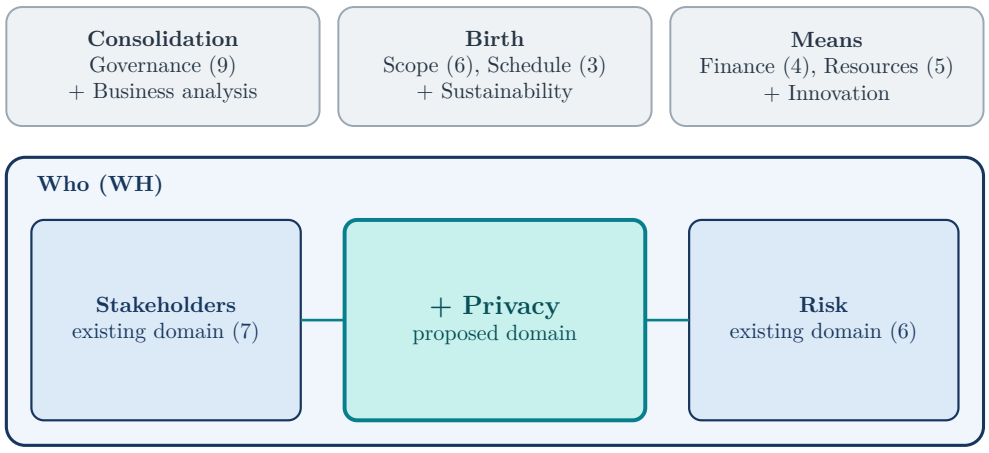

Academic proposal: processes P1–P8 are not official PMBOK 8 processes.

Authors: Filipe Alves de Sousa and members of the Colégio Reciclagem 1 group
Course: IT Project Management (GPTI) – PPCA/CIC/UnB
Code: 3p2 / 3R31

Problem and contribution

PMBOK 8 [14] mentions data protection and privacy, but its seven domains and 40 processes do not organize personal-data processing as a separate management object. The digital-twin studies examined address legal requirements and technical controls, not project management processes [17]. We propose **Privacy** next to **Stakeholders (7 processes)** and **Risk (6 processes)**. Our central question is: **how might project data practices affect people, and what evidence supports the project's choices?**

Figure 1 — Where Privacy fits

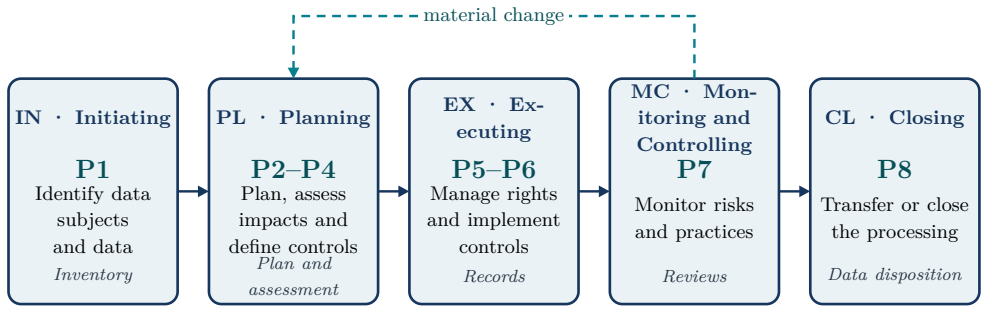

The four concentrations are an organization adopted in this work; ***Privacy*** *is this group's contribution to the* ***Who*** *concentration.*

Alignment with the 6 principles

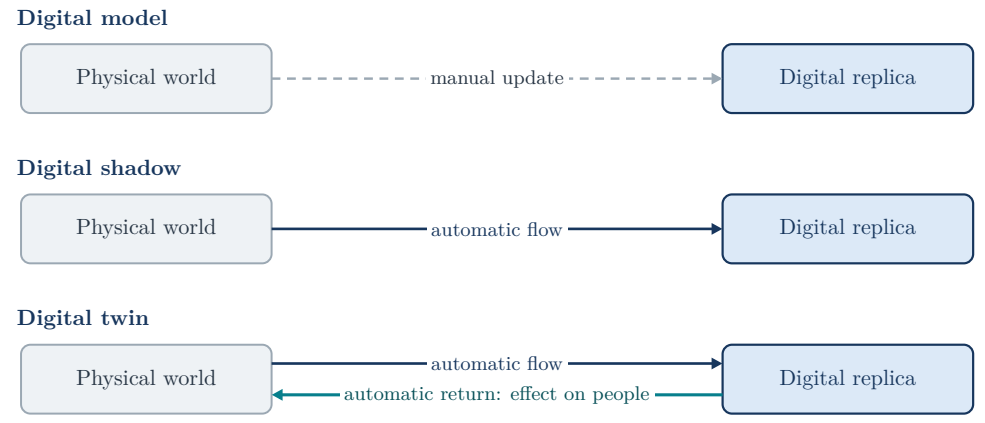

1AHV end-to-end view of data flows
2FOV benefits weighed against potential harms
3QPD privacy as a verifiable quality criterion
4BAL accountable decisions and owners
5SPA lasting effects on people
6BEC channels for challenge and learning

Figure 2 — How the domain spans the project

P1–P8 are group proposals. *The return arrow represents reassessment; data processing may continue after project closure.*

Figure 3 — Digital twins: flow direction sets the exposure

The classification follows Kritzinger et al. [12]; the more automatic and frequent the flow, the greater the exposure of people. P1–P8 should identify data subjects, purposes, sharing, risks, and data disposition without duplicating Stakeholders and Risk.
