Privacy in PMBOK 8: a proposed performance domain for the Who concentration

Authors: Filipe Alves de Sousa, Emanuel Brandão de Galvão Correia, Ruben Isaac Dias da Silva, and Carlos Eduardo da Silva Papa
Course: IT Project Management (GPTI) – PPCA/CIC/UnB
Professors: Dr. João Mello da Silva and Dr. Edison Ishikawa
Deliverable: P3A — **Code:** 3p2 / 3R31

1. Problem and proposal

PMBOK 8 [14] mentions data protection and privacy, but its seven domains and 40 processes do not organize personal-data processing as a distinct management object. We propose **Privacy** in the **Who** concentration, alongside Stakeholders and Risk.

Guiding question: how might project data practices affect people, and what evidence supports the project's choices?

2. Where Privacy fits

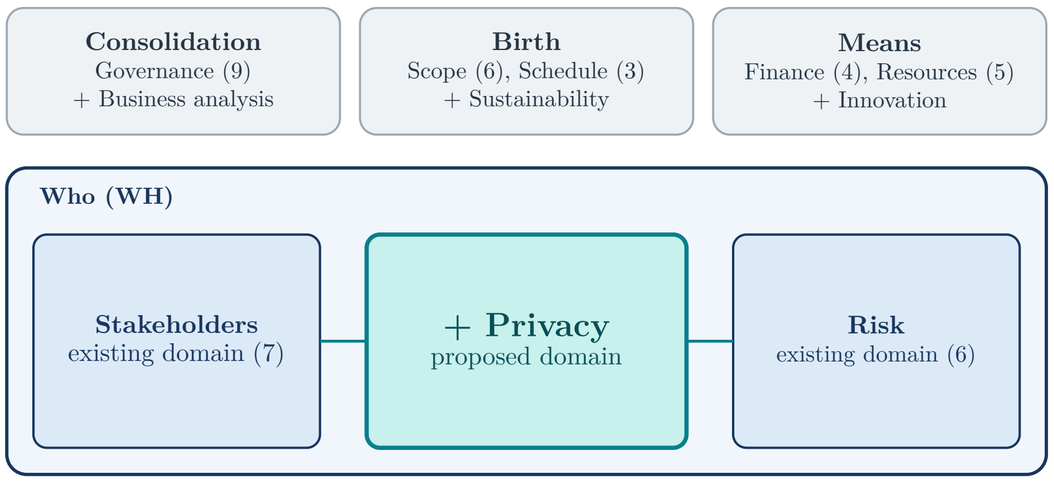

Figure 1: Position of the proposed domain among the concentrations.

The four concentrations are the organization adopted in this work. **Privacy** is the group's contribution to the **Who** concentration.

3. Alignment with the 6 principles

1AHV End-to-end view of data flows
2FOV Benefits weighed against potential harms
3QPD Privacy as verifiable quality
4BAL Accountable decisions and owners
5SPA Lasting effects on people
6BEC Channels for challenge and learning

4. Eight proposed processes: decision and evidence

- **P1 Identify subjects and data** → initial inventory.
- **P2 Define purposes and roles** → privacy plan.
- **P3 Assess impacts on people** → assessment; DPIA if warranted.
- **P4 Choose proportionate responses** → control plan.
- **P5 Inform and route requests** → response records.
- **P6 Apply controls and handle incidents** → implementation evidence.
- **P7 Review effectiveness and new purposes** → plan update.
- **P8 Decide retention, transfer, or deletion** → disposition record.

5. Privacy across the project

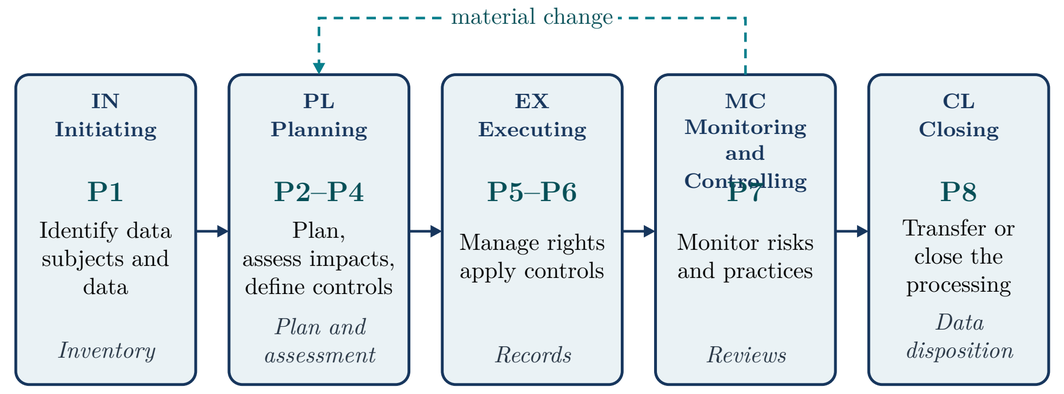

Figure 2: Privacy across the project.

P1–P8 are **group-proposed processes** across the five focus areas. The return arrow indicates reassessment; data processing may continue after project closure.

6. Digital twins and data exposure

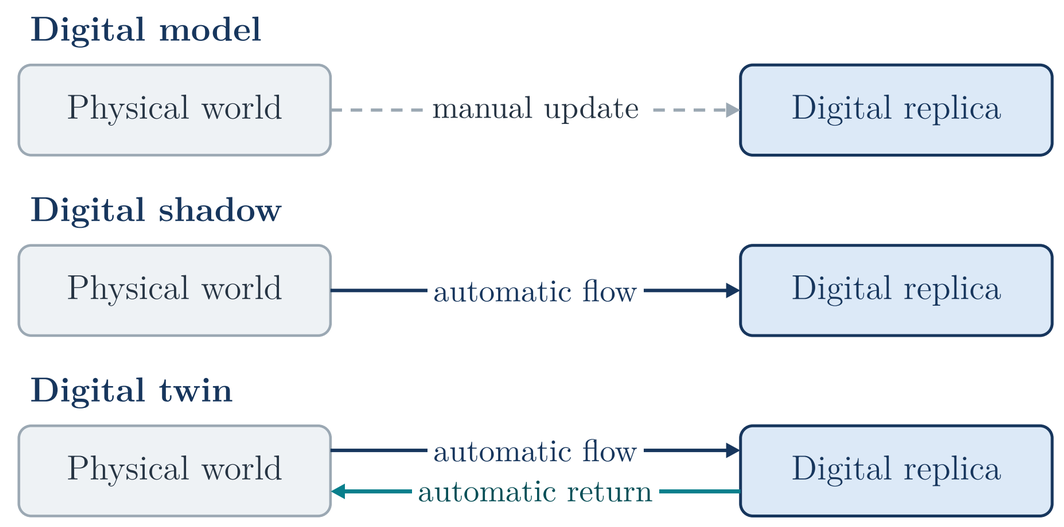

Figure 3: Digital twins and data exposure.

The classification follows Kritzinger et al. [12]. Automatic, frequent flows call for attention to data subjects, purposes, sharing, risks, and data disposition [17].
